

Parabolas on the move! Exit ticket

Parent Function

Based on the parent function...

How would you make the parabola **dilate**...get narrower (stretch) or get wider (compress)?

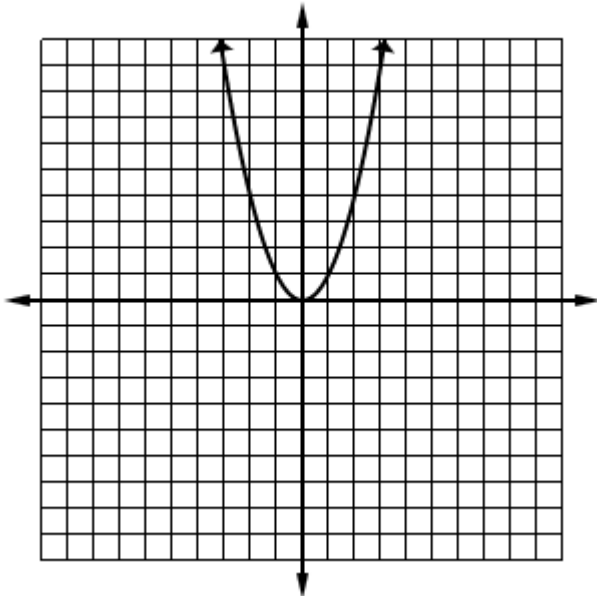

How would you make the parabola **translate** to the left or to the right (and not up and down)?

How would you make the parabola **reflect** across the x-axis?

How would you make the parabola **translate** up or down (and not left and right)?
