Questions on analogy for week 3

Now that you have seen the animation, we need to help out Amir to send all the equipment to Navneet. We also know the constraints that are there, some of which are time bound constraints, some of which are weight bound constraints. So, what you need to do is to come up with scenarios by which Amir can send all this equipment to Navneet according to their constraints. And post your responses in the discussion forum. In the next week, we will come back and we will look at these responses in detail and see how they are connected to the concept of transport layer in a network.
