Quiz

Which machine learning tool would be the best option for someone who has limited application development or data science skills?

- A. AI Platform
- B. Cloud AutoML
- C. Tensorflow
- D. Speech API

Now let us test what you have learned so far with a short quiz. Which machine learning tool will be the best option for somebody who has limited application development or data science skills. If you said cloud auto ML yes that is a great option for when you want to leverage machine learning and you are not an application developer or a data scientist.

Quiz

What Google machine learning API can be used to gain meaning and sentiment from text?

- A. Cloud Natural Language API
- B. Cloud Speech-to-Text API
- C. Cloud Vision API
- D. Cloud Video Intelligence API

Next what Google machine learning API can be used to gain insight and meaning from sentiment inside of text. If you said the cloud natural language API absolutely it is used to try to derive that meaning and that sentiment from text.

Quiz

Which machine learning service can run Tensorflow at scale?

- A. Pre-trained machine learning APIs
- B. Cloud AutoML
- C. AI Platform
- D. Tensorflow

Next up which machine learning service can run tensorflow at scale, what do you think? AI platform allows you to run tensorflow at scale by providing you that managed infrastructure.
