Let me now ask you all a question. Look at these four people Ram, Raj, Radha, and Sita are from the domain. And I am going to map them to the vehicles that they use for reaching their office. Ram uses a bicycle. Raj uses a public transport let's say a bus. Radha walks. And Sita uses a car.

Now you see no two people uses the same mode of transport. They all are using different modes of transport. Now this is an example of a one-one function.
