1 The procedure to install PHP & MySQL on Ubuntu Linux OS

1. To follow the installation procedure, you need to be connected to the internet.

2. You must have `Synaptic Package Manager` installed on your machine.

3. If not installed, please install `Synaptic Package Manager` using `Ubuntu Software Center`.

1.1 The procedure to install `PHP & MySQL`

1. On Ubuntu 10.04 - Click on `System >> Administration >> Synaptic Package Manager`.

2. On Ubuntu 11.04 and higher,

   (a) Press the `Window` key on your keyboard to open `DashHome`.
   (b) Type `Synaptic Package Manager`.
   (c) Click on the `Synaptic Package Manager` option.

3. Enter your password.

4. Click on `OK`.

5. In the search box type `apache2`.

6. Click on the `apache2` check box and click on `Mark for Installation`.

7. Click on `Mark`.

8. Then clear the search box and type `php5`.

9. Click on the `php5` check box and click on `Mark for Installation`.

10. Click on `Mark`.

11. Again clear the search box and type `mysql-server`.

12. Click on the `mysql-server` check box and click on `Mark for Installation`.

13. Click on `Mark`.

14. Again clear the search box and type `phpmyadmin`.

15. Click on the `phpmyadmin` check box and click on `Mark for Installation`.

16. Click on `Mark`.

17. Finally, click on `Apply`.

18. Again, click `Apply` for installation.

19. The installation will take a few minutes depending on your internet speed.

1.2 The procedure to install `PHP & MySQL` **via** `Terminal`

1. Open the terminal by pressing `Ctrl + Alt + T` keys together.

2. Now in the terminal type `sudo apt-get install apache2 php5 mysql-server phpmyadmin` and hit `Enter`.

3. Enter the system password if required.

4. It will display how much have to download from internet and how much disk space will occupy.

5. Press `y` to confirm this.

6. This will install Apache Server, PHP, MySQL and Phpmyadmin.
