

Assignment – Modification tools to Stretch and Mirror in QCAD

I would like you to draw following using tools learnt in this tutorial.

For **Stretch tool**: draw rectangle of size 50x10, and circle of radius 3 inside. Stretch it 5 units to right.

For **Mirror tool**: draw horizontal line and then draw line of 30 units at 67 degree angle. At the end of it draw another 30 units line. Mirror these two lines and draw line joining these end points.
