## PSG COLLEGE OF ARTS & SCIENCE (AUTONOMOUS)

## MSc DEGREE EXAMINATION DECEMEBR 2023

(First Semester)

#### Branch - FOOD TECHNOLOGY MANAGEMENT

## FOOD PROCESSING AND PRESERVATION TECHNOLOGY

Time: Three Hours

Maximum: 75 Marks

## SECTION-A (10 Marks)

Answer ALL questions

ALL questions carry EQUAL marks  $(10 \lor 1 = 10)$ 

|               |                 | ALL questions carry EQUAL marks $(10 \times 1)$   | =10)       |     |
|---------------|-----------------|---|------------|-----|
| Module<br>No. | Question<br>No. | Question  | K<br>Level | СО  |
| 1             | 1               | Recall, when the historical period has witnessed the emergence of convenience foods and additives in food processing.  a) 19th century b) 18th century c) 20th century d) 17th century  | K1         | CO1 |
|               | 2               | Show which preservation method involves the use of high temperatures to kill microorganisms and enzymes.  a) Freezing b) Dehydration c) Canning d) Fermentation   | K2         | CO1 |
| 2             | 3               | Choose which property of foods is affected by freezing and thawing, leading to changes in texture.  a) Color b) Protein structure c) Water content d) Flavor  | K1         | CO2 |
|               | 4               | Infer which high-temperature preservation method is commonly used for dairy products and fruit juices to achieve long shelf life without refrigeration.  a) UHT processing b) Pasteurization c) Commercial sterilization d) Blanching | K2         | CO2 |
| 3             | 5               | Find a conventional drying method that utilizes natural air circulation to remove moisture from substances.  a) Air drying b) Sonic drying c) Supercritical drying d) Hybrid drying   | K1         | CO3 |
|               | 6               | Show the characteristic for which multiple effect evaporators are recognized.  a) Slow concentration rates c) High energy efficiency d) Limited applications  | K2         | CO3 |
| 4             | 7               | Spell the technique employed for purifying and isolating fermentation products.  a) Filtration b) Distillation c) Freezing d) Evaporation   | K1         | CO4 |
|               | 8               | Show the enzyme responsible for breaking down proteins into smaller peptides.  a) Pectinase b) Amylase c) Protease d) Lactase   | K2         | CO4 |
| 5             | 9               | Find the specific area in which ultrasonic preservation demonstrates notable effectiveness.  a) Pasteurization b) Dehydration c) Sterilization d) Emulsification  | K1         | CO5 |
|               | 10              | Show the food preservation process in which PEF technology is commonly employed.  a) Dehydration b) Pasteurization c) Microwaving d) Smoking  | K2         | CO5 |

## SECTION - B (35 Marks)

Answer ALL questions

|               |                 | ALL qu   | estions | carry EQU | JAL Marks | (5 ×       | 7 = 35) |  |
|---------------|-----------------|----------|---------|-----------|-----------|------------|---------|--|
| Module<br>No. | Question<br>No. | Question |         |           |           | K<br>Level | CO      |  |
| 140.          | 140.            | Compare  | and     | contrast  | between   | primary,   |         |  |
| 2             | 11 9            |          |         |           |           |            | 1       |  |

| Module<br>No. | Question<br>No. | Question Question   | K<br>Level | СО  |
|---------------|-----------------|---|------------|-----|
| 1             | 11.a.           | Compare and contrast between primary, secondary, and tertiary food processing.  (OR)                            | K4         | COI |
|               | 11.b.           | List the key steps involved in food processing, from raw material handling to distribution.                     |            |     |
| 2             | 12.a.           | Identify the importance of determining process time and process lethality in high-temperature preservation.     | W2         | CO1 |
|               | 12.b.           | (OR)  Construct the working principle of mechanical refrigeration systems used in low-temperature preservation. | K2         |     |
| 3             | 13.a.           | Select and apply a novel drying method suitable for a heat sensitive products.                                  | K3         | CO1 |
|               | 13.b.           | (OR)  Construct the working principle and applications of forced circulation evaporators in food processing.    |            |     |
| 4             | 14.a.           | Analyze the benefits of fermented foods in terms of preservation and nutritional enhancement.                   | -          |     |
|               | 14.b.           | (OR)  Classify enzymes based on their functions and provide examples of enzymes used in the food industry.      |            | CO1 |
| 5             | 15.a.           | Explain the working principle of Pulsed Electric Field (PEF) technology in food processing.                     | K5         | COI |
|               |                 | (OR)  |            | 001 |
|               | 15.b.           | Determine the principle of radio frequency and radiation control in food processing.                            |            |     |

# SECTION -C (30 Marks) Answer ANY THREE questions

 $(3\times10=30)$ ALL questions carry EQUAL Marks
